

Haiwell Smart Factory Solutions

Realize the seamless connection between the ERP/MES management system and the field devices.

Eliminate information silos, improve factory automation and informationization.

Real-time information collection and interactive tracking to achieve full transparency management.

Reduce equipment operation and maintenance costs, improve production skills.

Solution Features

Haiwell IOT Cloud HMI, IOT Cloud BOX, IPC, Cloud SCADA can connect to Haiwell Cloud Platform, support MQTT protocol.

The following is "Haiwell Smart Factory network schematic diagram" shows the device distributed in Beijing, Shanghai, Xiamen, New York and other places around the world. The remote monitoring of mobile APP and Cloud website can be easily realized through Haiwell Cloud platform, and remote PLC, IOT Cloud HMI and IOT Cloud BOX can be upload and download remotely. The device supports the Cloud alarm function, which can receive the alarm push information at the first time of the mobile APP or website if the field device has an alarm message, support Cloud map, device location distribution can be viewed directly.

Centralized monitoring Display

Haiwell Cloud camera supports remote video monitoring. Haiwell TVBOX can display single or multi-screen in one large screen through Haiwell Cloud Platform, low cost for large board monitoring function.

Remote Centralized Control

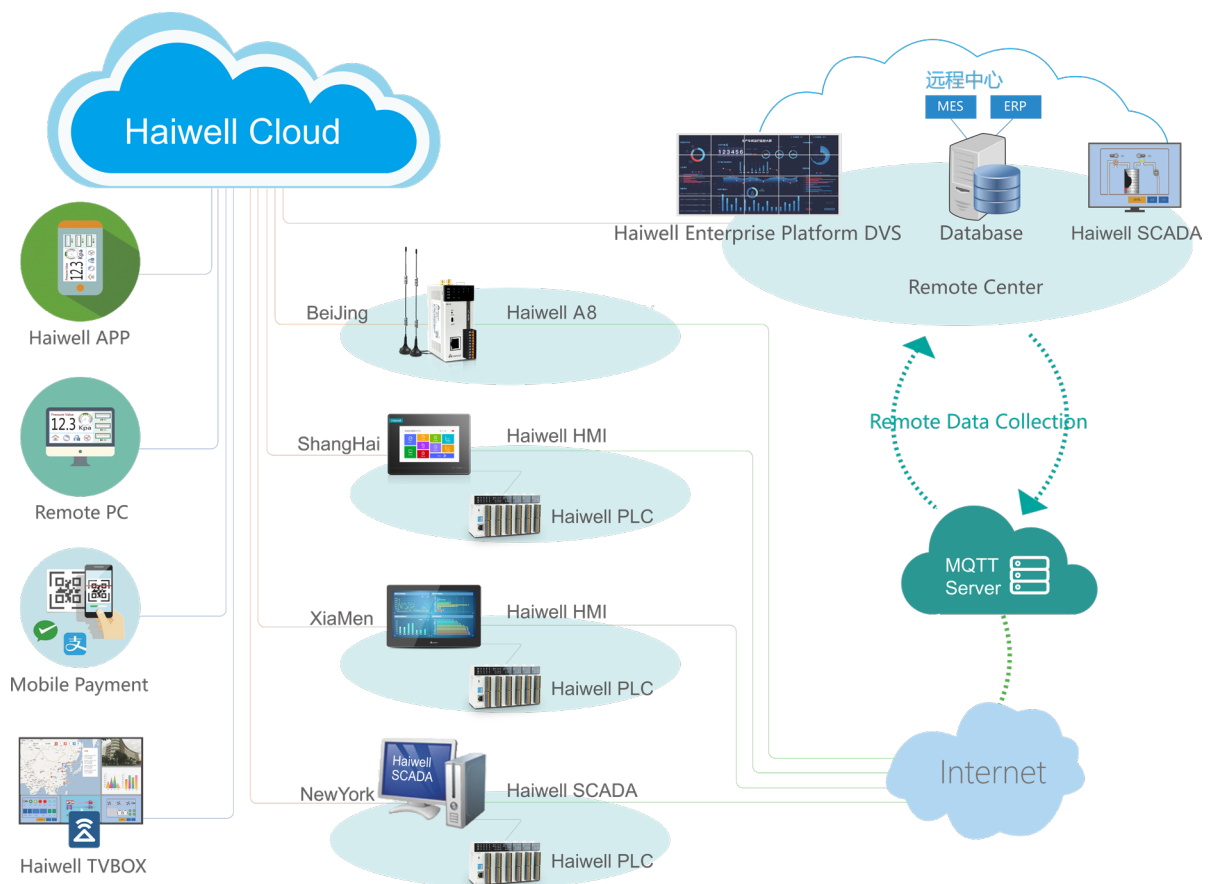

Haiwell Cloud SCADA can flexibly call variable data of devices in different places through the Cloud platform to conduct secondary development configuration, making network monitoring more convenient for engineers.

Offsite Data Integration

All Cloud devices of Haiwell support MQTT protocol, and transmits it to the MQTT server via the Internet. The remote center database stores the sent data for ERP and MES system calls.
